

AN221

Voice Interactive GPS Navigation System

Simply The Best...

Start navigating right away. While the technology is complex, our user interface is designed to be straightforward, which makes the AN221 easy to operate. With no screen or keyboard to worry about, the system quickly connects in your car.

The Voice Interactive Difference...

Driving today's crowded roadways requires 100% of the driver's attention. Pronounced Technologies' voice interactive system allows the driver to enter a destination by voice. The navigator provides verbal turn-by-turn driving directions, keeping the driver's focus where it belongs - on traffic conditions and street signs.

The Technology...

The AN221 combines three powerful technologies - Speech Recognition, Digital Mapping, and Global Positioning, with a straightforward user interface. The result is a technologically advanced navigation system that is very easy to use and operate.

Listen and Look...

Listen carefully to this navigator. It actually says "PREPARE TO BEAR RIGHT AND TAKE THE ARLINGTON ROAD EXIT" in a human voice. This is the freeway sign the driver will look for and see. Other systems either use a computerized voice, or display the street sign and freeway names on a distracting screen.

Features and Benefits

- n **Safety First**
A real human voice provides turn-by-turn directions, allowing the driver to remain focused on traffic conditions and upcoming turns.
- n **Verbal Keyboard**
Patented speech technology allows the driver to enter the destination verbally. Route information can be quickly obtained just by asking for it.
- n **Automatic Rerouting**
Automatically recalculates the route if a turn is missed or a detour is encountered.
- n **Detour by Distance**
If a road is blocked or a traffic jam occurs, the driver can define the length of the detour in one-mile increments. This feature is available for both freeways and surface streets.
- n **Best Route**
Selects the most efficient route by analyzing distance, road type, and posted speed limits.
- n **Multiple Address Tour**
Route to as many as 25 addresses by order of input or shortest distance.
- n **Portable**
Can be easily transported between vehicles.
- n **High Capacity Address Book**
Address book holds up to 999 entries.
- n **Extensive Data Base**
Navigate to thousands of addresses and POI's throughout the continental United States.
- n **Smart Find for POI's**
Advanced software recognizes if a point of interest is in a nearby city, even if the user supplies incorrect city information.
- n **RS232 Connection**
For custom solutions a serial port allows the navigator to interface with PC's and other devices.
- n **Removable Media**
Data discs can be quickly and easily removed, making updates to map database or operating system effortless.
- n **Nearest Category**
Quickly locate the nearest gas station, hotel, restaurant, or ATM.
- n **Compact**
Dimensions are (H x W x D): 3" x 6" x 8".
- n **Affordable**
This feature packed system is available at half the price of complicated screen-based systems.
